A CIRCULAR ECONOMY FOR THE CONSTRUCTION SECTOR

***Collection of construction waste for better
recycling in France***

Alice FRANZ

Policy Officer – Energy & Environment

Figures from construction SMEs

In France

- **51%** new built projects
- **68%** housing maintenance and improvement projects
- **82%** works in households
- **30%** public procurement

Craftsmen = local market

SMEs waste

- Distinction new built & renovation projects
- Mixed and contaminated waste
 - Various type of waste but in small quantities
 - Difficulties to organise waste management

Waste platforms

Waste grouping platforms/transit platforms:

- Possibility to receive small quantities
- Temporarily store waste
- Economy on transport costs
- Optimisation of waste transport by big carriers
- Availability for hazardous waste

Draft decree

- Building materials dealers must take back construction waste (materials, products or equipment) of the same type than the ones they sell
- Sales space > 400m² and turnover € 1 million
- Possibility for dealers to organise one bigger collect centre - distance max 10km

Draft decree

- Gain of time : purchase of products + waste dump
- Incentive to sort waste
- Respect of proximity criterion

Partnership with Veolia

Clic'BAG:

1. Online order & online payment
2. Bags received within 5 days
3. Bags on site
4. Waste in the bag except hazardous waste

5. Set up a date for picking up the clic'BAGs & receive a confirmation of waste disposal and recycling

European Builders Confederation

Thank you for your attention!
